LESSON PLAN FOR THE ACADEMIC YEAR 2023-24 SECOND SEMESTER

| Name of the Faculty | : | Dr. B. N. Chandrashekar |
|-----------------------|---|---------------------------------------|
| Title of the Paper | : | CHEMISTRY – II |
| Subject code | : | CHEDSC201 |
| Lesson Plan Duration | : | 14 weeks |
| Total teaching period | : | 14 HourS |
| Workload per week | : | 01 Hour Theory and 04 HourS Practical |
| | | |

| Week | Theory |
|------|--|
| 1 | Titrimetric analysis: Basic principle of titrimetric analysis. Classification, Preparation and dilution of reagents/solutions |
| 2 | Normality, Molarity and Mole fraction. Use of N_1V_1 = N_2V_2 formula, Preparation of ppm level solutions from source materials (salts) |
| 3 | Conversion factors. Acid-base titrimetry: Titration curves for strong acid vs strong base, weak acid vs strong base and weak base vs strong acid titrations. |
| 4 | Titration curves, Quantitative applications – Selecting and standardizing a titrant, inorganic analysis - alkalinity, acidity |
| 5 | Complexometric titrimetry: Indicators for EDTA titrations - theory of metal ion indicators, |
| 6 | Titration methods employing EDTA - direct, back, displacement and indirect determinations |
| 7 | Application determination of hardness of water |
| 8 | Redox titrimetry: Balancing redox equations, calculation of the equilibrium constant of redox reactions |
| 9 | Titration curves, Theory of redox indicators, calculation of standard potentials using Nernst equation. Applications. |
| 10 | Precipitation titrimetry: Titration curves, titrants and standards, indicators for precipitation titrations involving silver nitrate |
| 11 | Volhard's and Mohr's methods and their differences. |
| 12 | Gravimetric Analysis: Requisites of precipitation, mechanism of precipitation, Factors influencing precipitation, |

| 13 | Co-precipitation, post-precipitation, Advantages of organic reagents over inorganic reagents |
|----|--|
| 14 | Reagents used in gravimetry (8-hydroxy quinoline (oxine), Dimethylglyoxime (DMG). |
| 15 | Unit test |

| Practical | | | | |
|-----------|--|--|--|--|
| Practical | Торіс | | | |
| Day | | | | |
| 1 | Determination of density using specific gravity bottle and viscosity of liquids using Ostwald's viscometer (Ethyl acetate, Toluene, Chloroform, Chlorobenzene or any other nonhazardous liquids) | | | |
| 2 | Determination of the density using specific gravity bottle and surface tension of liquids using Stalagmometer (Ethyl acetate, Toluene, Chlorobenzene, any other non-hazardous liquids. | | | |
| 3 | Demonstration-Determination of the composition of liquid mixture by refractometry. (Toluene & Alcohol, Water & Sucrose) | | | |
| 4 | Determination of partition/distribution coefficient - i) Acetic acid in water and cyclohexane. ii) Acetic acid in Water and Butanol. iii) Benzoic acid in water and toluene. | | | |
| 5 | Determination of rate constant of decomposition of H_2O_2 catalyzed by $FeCl_3$ | | | |
| 6 | Determination of percentage composition of NaCl solution by determining miscibility temperature of phenol-water system. | | | |
| 7 | Revision | | | |
| 8 | Practical Test - 2 | | | |
| 9 | Determination of alkali present in soaps/detergents using standard HCl | | | |
| 10 | Determination of iron(II) using potassium dichromate | | | |
| 11 | Determination of iron(II) using potassium dichromate | | | |
| 12 | Determination of hardness of water Standardized EDTA solution | | | |
| 13 | Determination of alkali content in antacids using standard HCl solution. | | | |
| 14 | Determination of chlorine in bleaching powder by iodometry (standard solution to be given) | | | |
| 15 | Practical Test - 2 | | | |

Name of the Faculty : Title of the Paper : Workload per week :

Dr.N.Shankaresh

Inorganic Chemistry 02 Hours Theory + 04 Hours Practicals

| | Theory | | | |
|------|---------|--|--|--|
| Week | Lecture | Topic including | | |
| | Day | Assignment/Test | | |
| 1 | 1 | s, p, d and f-block elements, the long form of periodic table | | |
| | 2 | Liquid Crystals Explanation, Classification with examples- | | |
| | | Smetic, nematic, cholesteric, disc shaped and polymeric | | |
| 2 | 3 | Detailed discussion of the following properties of the | | |
| 4 | 5 | elements, with reference to s and p-block elements | | |
| | 4 | Structures of nematic and cholesteric phases-molecular | | |
| | | arrangements in nematic and cholesteric liquid crystals. | | |
| 3 | 5 | (a) Atomic radii (vander Waals) | | |
| | 6 | Applications of liquid crystals in LCDs and thermal sensing | | |
| 4 | 7 | (b) Ionic and crystal radii | | |
| | 8 | Solids Forms of solids: Unit cell and space lattice, anisotropy | | |
| | | of crystals, size and shape of crystals | | |
| 5 | 9 | (c) Covalent radii | | |
| | 10 | Laws of Crystallography: Law of constancy of interfacial | | |
| | | angles, Law of rational indices, Law of symmetry (Symmetry | | |
| | | elements) | | |
| 6 | 11 | (d) Ionization enthalpy | | |
| | 12 | Crystal systems, Bravais lattice types and identification of | | |
| | | lattice planes. | | |
| 7 | 13 | successive ionization enthalpies and factors affecting | | |
| | | ionization energy. | | |
| | 14 | Miller indices and its calculation, | | |
| 8 | 15 | Applications of ionization enthalpy | | |
| | 16 | X-Ray diffraction by crystals: Bragg's law and derivation of | | |
| | | Bragg's equation | | |
| 9 | 17 | (e) Electron gain enthalpy, trends of electron gain enthalpy | | |
| | 18 | Single crystal and powder diffraction methods. | | |
| 10 | 19 | (f) Electronegativity, Pauling's/ Mulliken's/ Allred Rachow's/ | | |
| | | and Mulliken-Jaffé's | | |
| | 20 | Defects in crystals, glasses and liquid crystals. Numerical | | |
| | | problems | | |
| | 21 | Electronegativity scales. | | |
| | 22 | Distribution Law Nernst Distribution Law - Statement and its | | |
| | | derivation.Distribution constant, factors affecting distribution | | |
| | | constant, | | |

| 12 | 23 | Variation of electronegativity with bond order, |
|----|----|--|
| | 24 | validity of Distribution Law, Modification of distribution law |
| | | when molecules undergo a) Association |
| 13 | 25 | Partial charge, hybridization, group electronegativity |
| | 26 | b) Dissociation. Application of Distribution Law in Solvent |
| | | extraction. Derivation for simple and multiple extraction |
| 14 | 27 | Trends in the chemistry of the compounds of groups 13 to 17 |
| | | (hydrides, carbides, oxides and halides) are to be discussed |
| | 28 | Principles of distribution law in Parkes Process of |
| | | desilverisation of lead. Numerical Problems |
| 15 | 29 | Revision of syllabus. |
| | 30 | Revision of syllabus. |

Name of the Faculty : Title of the Paper : Workload per week :

Nagendra C S Inorganic Chemistry 01 Hour Theory

| Week | Theory |
|------|--|
| 1 | Nucleophilic substitution at saturated carbon |
| 2 | Mechanism of SN_1 and SN_2 reactions with suitable examples. |
| 3 | Energy profile diagrams, |
| 4 | Stereochemistry |
| 5 | Factors affecting SN ₁ and SN ₂ reactions |
| 6 | Aromatic Electrophilic substitution reactionsMechanisms |
| 7 | σ and π complexes, Halogenation, |
| 8 | Nitration, Sulphonation |
| 9 | Friedel Crafts alkylation |
| 10 | Acylation with their mechanism |
| 11 | Activating and deactivating groups |
| 12 | Orientation influence |
| 13 | Ortho-para ratio |
| 14 | Aromatic nucleophilic substitution reaction |
| 15 | SNAr and Benzyne mechanism with suitable examples |

LESSON PLAN FOR THE ACADEMIC YEAR 2023-24 FOURTH SEMESTER

| Name of the Faculty : | Dr. B.N. Chandrashekar |
|--------------------------------|---------------------------------------|
| Title of the Paper : | CHEMISTRY - IV (Analytical Chemistry) |
| Subject code : | CHEDSC401 |
| Lesson Plan Duration : | 14 weeks |
| Total Teaching Period : | 14 Hours |
| Workload per week : | 1 Hour Theory + 04 Hours Practical |

| Week | Theory |
|------|---|
| 1 | Quantitative analysis-Instrumental methods: Electromagnetic spectrum. |
| 2 | Absorption of electromagnetic radiation, |
| 3 | Definition and units of frequency, wavelength, wave number Beer's law, Beer-Lambert law derivation |
| 4 | Definition and units of frequency, wavelength, wave number Beer's law, Beer-Lambert law derivation |
| 5 | Deviations from Beer's law, limitations |
| 6 | Construction of calibration graph (Plot of absorbance versus concentration) |
| 7 | Evaluation, Procedures- standard addition |
| 8 | Internal standard addition, validation parameters-detection limits, sensitivity, dynamic/linearity range |
| 9 | Instrumentation, single beam and double beam spectrophotometers, |
| 10 | Quantitative applications of colorimetry (determination of Fe, Mo, Cu, Ti and PO43-) and numerical problems on application of Beer's law. |
| 11 | Nephelometry and Turbidimetry: Introduction, principle |
| 12 | Instrumentations of nephelometry and turbidimetry |
| 13 | Effects of concentration, particle size and wavelength on scattering; |
| 14 | Choice between Nephelometry, applications of Nephelometry & Turbidimetry (determination of SO ₄ ²⁻ and PO ₄ ³⁻). |
| 15 | Revision of syllabus. |

| Week | Practical Topic | |
|--------------------------|---|--|
| 1 | Qualitative analysis of mono Organic compounds: Urea | |
| 0 | Qualitative analysis of mono and bifunctional Organic compounds: | |
| 4 | Benzoic acid | |
| 3 | Qualitative analysis of mono Organic compounds: Salycilic | |
| 0 | acid,aniline | |
| 4 | Qualitative analysis of bifunctional Organic compounds | |
| | Salicylaldehyde | |
| 5 | Qualitative analysis of mono organic compounds: acetanilide | |
| 6 | Demonstration: Qualitative analysis of bifunctional Organic | |
| 0 | compounds Dichlorobenzene | |
| | Practical Test: Part - 1 | |
| 7 | Qualitative analysis bifunctional Organic compounds : p-Nitro toluene | |
| 9 | Qualitative analysis bifunctional Organic compounds : o-Cresol | |
| 10 | Colorimetric determination of (i) copper using ammonia solution. (ii) | |
| | Iron using thiocyanate solution. | |
| 11 | Colorimetric determination of nickel using DMG solution. | |
| Practical Test: Part - 2 | | |
| 12 | Repetition of experiments | |
| 13 | Repetition of experiments | |
| 14 | Repetition of experiments | |

| Name of the Faculty | : | Dr.N.Shankaresh |
|---------------------|---|--|
| Title of the Paper | : | Inorganic Chemistry and Physical Chemistry |
| Workload per week | : | 02 Hours Theory + 04 Hours Practical |

| | | Theory | | | | | |
|------|---------|--|--|--|--|--|--|
| Week | Lecture | Topic including | | | | | |
| | Day | Assignment/Test | | | | | |
| 1 | 1 | Structure and Bonding -II: Concept of resonance, | | | | | |
| | | resonance energy | | | | | |
| | 2 | First Law of Thermodynamics: Introduction, system, | | | | | |
| | | surroundings, types of systems. Thermodynamic Processes | | | | | |
| | | (isothermal, adiabatic, isochoric, isobaric and cyclic), | | | | | |
| 2 | 3 | Hybridization, types of hybridization, sp, sp2, sp3, dsp2, | | | | | |
| | | dsp3, d2sp3, sp3d2 with one example each | | | | | |
| | 4 | Nature of Heat and Work, Internal Energy, First Law of | | | | | |
| | | thermodynamics, Enthalpy of a System | | | | | |
| 3 | 5 | Energetics of hybridization. Bent's rule, Limitations of | | | | | |
| | | Valence Bond Theory. Molecular Orbital theory: LCAO | | | | | |
| | | concept: s-s, s-p, p-p, p-d and d-d combinations of | | | | | |
| | | orbitals, bonding | | | | | |

| | 6 | Work done in isothermal and adiabatic expansion of an |
|----|-----|--|
| | | ideal gas, Numerical problems |
| 4 | 7 | Nonbonding and antibonding molecular orbitals |
| | 8 | Joule -Thomson Expansion, Relation between Joule- |
| | | Thomson coefficient and other thermodynamic |
| | | parameters. |
| 5 | 9 | Non-bonding combinations of orbitals, Rules for linear |
| | | combination of atomic orbitals |
| | 10 | Second law of Thermodynamics: Limitations of first law of |
| | | thermodynamics. Reversible and Irreversible Processes, |
| 6 | 11 | Examples of molecular orbital treatment for homonuclear |
| | | diatomic molecules: H2, molecule, H2+ molecule ion, |
| | 12 | Concept of entropy, thermodynamic scale of |
| | | temperature,Statements of the Second Law of |
| | | Thermodynamics, |
| 7 | 13 | He ₂ molecule, He ²⁺ molecule ion, Li ₂ molecule, Be ₂ |
| | | molecule, B_2 molecule, C_2 molecule, N_2 molecule, N^{2+} |
| | | molecule ion, O_2 molecule, O^{2-} and O_2^{2-} molecule ions. |
| | 14 | Molecular and statistical interpretation of entropy, |
| | | Calculation of entropy change for reversible and |
| | | irreversible processes |
| 8 | 15 | M.O. Energy diagrams of heteronuclear diatomic molecules |
| | | with examples (NO, NO ⁺ , CO and HCl) |
| | 16 | Free Energy Functions: Gibbs and Helmholtz energy |
| 9 | 17 | Calculation of bond order, relationship between bond |
| | | order, bond energy |
| | 18 | Variation of S, G, A with T, V and P, Numerical problems, |
| | | Free energy change and spontaneity, Gibbs-Helmholtz |
| 10 | 10 | equation. |
| 10 | 19 | Bond length, magnetic properties based on MOT. |
| | 20 | Third Law of Thermodynamics: Statement of third law, |
| | | concept of residual entropy, calculation of absolute entropy |
| | 0.1 | of molecules. |
| | 21 | Metallic Bonding: General properties of metals- |
| | | conductivity, luster, malleability and cohesive force. |
| | 22 | Surface Chemistry Adsorption: Introduction, types of |
| | | adsorptions with examples. Types of adsorption isotherms. |
| | | Freundlich adsorption isotherm (only equation), |
| 12 | 23 | Crystal structures of metals and Bond lengths. Theories of |
| | | bonding in metals: |
| | 24 | Limitations. Langmuir adsorption isotherm (derivation to |
| | | be done) and BET equation (derivation not included). |

| 13 | 25 | Free electron theory, valence bond theory, molecular orbital or band theory of solids. Prediction of conducting properties of conductors, |
|----|----|---|
| | 26 | Catalysis: Types of Catalysis positive, negative, auto and induced), characteristics of catalysis, and theories with examples (intermediate compound theory and adsorption theory), Theory of acid base catalysis, Michaelis-Menten mechanism. |
| 14 | 27 | Insulators and semiconductors, extrinsic and intrinsic semiconductors using M.O. theory. |
| | 28 | Heterogeneous catalysis: surface reactions, unimolecular, bimolecular surface reactions. Autocatalysis with examples. Applications: Design process to removal of toxic compounds from industrial wastewater and treatment of portable water requirements. |
| 15 | 29 | Revision of syllabus. |
| | 30 | Revision of syllabus. |

Name of the Faculty : Title of the Paper : Workload per week :

Nagendra C S CHEMISTRY –IV (Organic Chemistry) 01 Hour Theory

| Week | Theory |
|------|--|
| 1 | Structure and Stereochemistry of Organic Compounds: Concept of |
| | isomerism, types of isomerism. Projection formulae of chiral molecules- |
| | Fischer (glyceric acid), |
| 2 | Newman (2,3-dibromobutane), Sawhorse (2,3-dibromobutane) and Fly- |
| | wedge (glyceric acid) projection formulae. Interconversion of projection |
| | formulae: |
| 3 | Conversion of; Fisher into Sawhorse projection (tartaric acid), Sawhorse |
| | intoFisher projection (2,3-dibromobutane), Sawhorse to Newman to |
| | Fisher projection (3-amino-3-bromo-2-chlorobutan-2-ol), |
| 4 | Fisher to Newman to Sawhorse (3-chloro-2,4-dihydroxybutanal), Fisher |
| | into Fly-wedge formula and vice- versa (2-bromo propanoic acid), |
| 5 | Geometrical isomerism: Cause of geometrical isomerism. Cis-trans |
| | isomerism(cinnamic acid, but-2-enedioic acid) and syn-anti isomerism |
| | (benzaldoxime, ethyl methylketoxime), |
| 6 | E/Z notations with examples following C.I.P rules. |
| 7 | Optical Isomerism: Optical activity, conditions for optical activity- |
| | Elements of symmetry (plane, center, C2-axis, rotation-reflection with |
| | examples). |
| 8 | Specific rotation, Chirality/Asymmetry, Enantiomers-definition with |
| | examples, |

| 9 | Properties, Molecules with two or more chiral centers, | | | |
|----|--|--|--|--|
| 10 | Diastereoisomers - definition with examples (threo and erythoisomers), | | | |
| 11 | Properties. Meso compounds- definition with examples. | | | |
| 12 | Optical isomerism in tartaric acid, biphenyls. | | | |
| 13 | Asymmetric synthesis, Walden inversion. Racemic modification- Definition with examples. | | | |
| 14 | Resolution-definition with examples, chemical and biochemical methods of resolution, Relative and absolute configuration, D/L convention, limitations, and R/S designations-CIP rules with examples. | | | |
| 15 | Revision of syllabus | | | |

LESSON PLAN FOR THE ACADEMIC YEAR 2023-24 SIXTH SEMESTER - PAPER -7

| Name of the Faculty | : | Dr. B.N. Chandrashekar |
|-----------------------|---|--|
| Title of the Paper | : | Chemistry-VII (Spectroscopy and Physical |
| Chemistry) | | |
| Subject code | : | CHEDSC601 |
| Lesson Plan Duration | : | 15 weeks |
| Total teaching period | : | 15 Hours + 15 Hours = 30 Hour |
| Workload Per Week | : | 02 Hours Theory and 04 Hours Practical |

| | Theory | | | |
|------|---------|---|--|--|
| Week | Lecture | Topic including | | |
| | Day | Assignment/Test | | |
| 1 | 1 | Ionic equilibria: Ionic equilibria in aqueous solutions, strong and weak electrolytes definition and examples | | |
| | 2 | Introduction, principle, modes of vibrations, | | |
| 2 | 3 | Ostwald's dilution law (to be derived) and its limitations. DebyeHuckel theory of strong electrolytes | | |
| | 4 | Vibrational frequency. Factors influencing vibration frequencies | | |
| 3 | 5 | Relaxation time, electrophoretic effect and viscous effect). Activity and activity coefficient–definition and their relation. | | |
| | 6 | Coupled vibration, electronic effects, and bond angles). Fingerprint region and its significance. | | |
| 4 | 7 | Hydrolysis of saltsDerivation of hydrolysis constant and degree of hydrolysis of the salt of weak acid and weak base (ammonium acetate as an example) | | |
| | 8 | Effects of H-bonding, conjugation, resonance, and ring size on IR absorptions. | | |
| 5 | 9 | Effect of temperature on degree of hydrolysis. (Numerical problems) | | |
| | 10 | IR absorption frequency positions in Hydrocarbons (alkanes) | | |

| 6 | 11 | Electrochemistry-II: Electrolytic and Electrochemical cells (galvanic cells)-Daniel cell (construction, working and cell reaction). |
|----|----|---|
| | 12 | IR absorption frequency positions inHydrocarbons (alkenes, alkynes, cycloalkanes, aromatic), |
| 7 | 13 | Reversible and irreversible cells, rules for representation of a cell, single electrode potential, Standard electrode potential |
| | 14 | halogen compounds, alcohols and phenols |
| 8 | 15 | Sign convention for electrode potential, Nernst equation for single electrode potential (Derivation) |
| | 16 | Ethers, aldehydes and ketones (aliphatic, alicyclic,& aromatic) |
| 9 | 17 | Reference electrodes: Calomel electrode, Ag-AgCl electrode. Weston standard cell Page 8 (Construction, working, reaction and standard emf). |
| | 18 | Esters and lactones, carboxylic acids, acid halides, acid anhydrides, amides, lactams, amines, amino acids, nitro compounds, anilides |
| 10 | 19 | Equilibrium constant and free energy of a cell reaction, Concentration cell with transport (example) concentration cell without transport, EMF of concentration cell (derivation) |
| | 20 | Nitriles, thiols, thiophenols, sulphonic acids, sulphonamides, and hetero aromatic compounds. |
| 11 | 21 | Liquid junction potential. Salt bridge. Application of concentration cell: Valency of ions and solubility product of sparingly soluble salt. |
| | 22 | Coordination compounds: Changes in infrared spectra of donor molecules upon coordination |
| 12 | 23 | Applications of EMF measurements |
| | 24 | N,N-dimethylacetamide, urea |
| 13 | 25 | (a) Determination of pH of a solution using - (i) quinhydrone electrode, |
| | 26 | DMSO, pyridine N-oxide, ammine, cyano, cyanato and thiocyanato complexes |
| 14 | 27 | (ii) Glass electrode. (b) Potentiometric titration-principle and location of end point in |
| | 28 | mono and multinuclear carbonyl complexes |
| 15 | 29 | (i) Oxidation - reduction reaction, (ii) Precipitation reaction, iii) acid-base reaction |
| | 30 | nitrosyls, and phosphine complexes |
| 16 | 31 | Revision of syllabus. |
| | 32 | Revision of syllabus. |

| Practical | | |
|-----------|--|--|
| Week | Торіс | |
| 1 | Gravimetric determination of Fe in iron ore as Fe ₂ O ₃ | |
| 2 | Gravimetric estimation of calcium as calcium oxide. | |
| 3 | Gravimetric estimation of aluminum as aluminum oxide | |
| 4 | Gravimetric estimation of magnesium as magnesium 8-hydroxy oxinate. | |
| 5 | Gravimetric estimation of lead as lead chromate Volumetric estimation of Ca and Mg in dolomite solution | |
| 6 | Gravimetric determination of Ni using DMG in Cu and Ni solution Volumetric estimation of Fe in Cu and Fe solution. | |
| 7 | Practical Test: Part - 1 | |
| 8 | Gravimetric determination of Fe using NH ₄ OH in Fe and Cr solution. Volumetric estimation of Zn in Cu and Zn solution | |
| 9 | Gravimetric estimation of Cu using NH ₄ SCN in Cu and Zn solution Volumetric estimation of Ni in Ni and Zn solution | |
| 10 | Preparation of hexammine nickel(III) chloride | |
| 11 | Preparation of chloropentaminecobalt(III)chloride. | |
| 12 | Preparation of tris(oxalato)ferrate(III) and estimate the iron. | |
| 13 | Preparation of hexamminecobalt(III)chloride(demonstration). Preparation of mercury tetrathiocyantocobaltate(II) (demonstration). | |
| 14 | Practical Test: Part - 2 | |
| 15 | Repetition of experiments. | |

Name of the Faculty:Title of the Paper:Workload Per Week: :

Mr.C. S. Nagendra Organic Chemistry 01 Hour Theory

:

| Week | Theory |
|------|--|
| 1 | Aromatic Electrophilic Substitution Reactions: Quantitative treatment of reactivity in substrates and electrophiles |
| 2 | Amination, sulfonylation, diazonium coupling, Vilsmeier-Haack reaction |
| 3 | Gatterman reaction, Gatterman-Koch reaction and Hoesch reaction |
| 4 | Aromatic Nucleophilic substitution reactions |
| 5 | The Goldberg reaction, |
| 6 | Bucherer reaction, Schiemann reaction, |
| 7 | von Richter reaction, and Sommelet-Hauser reactions |

| 8 | AdditionReactions: Addition reactions of cyclopropane ring |
|----|---|
| 9 | Addition reactions of carbonheteroatom multiple bonds |
| 10 | Mechanism of metal hydride reduction (NaH, LiH, LiAlH4, NaBH4), |
| 11 | Grignard reagent (CH3MgBr) and organolithium (CH3Li) saturated and unsaturated carbonyl compounds |
| 12 | Hydrolysis of nitriles with mechanism. Wittig, Mannich and Stobbe reactions. |
| 13 | Elimination Reactions: Effects of substrate structure |
| 14 | Attacking base, the leaving group |
| 15 | The medium on elimination reactions. Chugaev reaction. |

Name of the Faculty:Dr. N. ShankareshTitle of the Paper:Inorganic Chemistry Inorganic Chemistry

_

| The of the Paper | • | morganic Chemi |
|-------------------|---|----------------|
| Workload Per Week | : | 01 Hour Theory |
| | | |

| Week | Theory |
|------|--|
| 1 | Metal-ligand bonding: Valence bond theory: Salient features, |
| | formation and magnetic properties of octahedral complexes |
| 2 | $[Fe(CN)_6]^{4-}$, $[Fe(CN_6)]^{3-}$, $[Co(CN)_6]^{3-}$, $[CoF_6]^{3-}$ $[Cr(H_2O)_6]^{3+}$ and |
| | $[Fe(H_2O)_6]^{2+}$. |
| 3 | Formation and magnetic properties of tetrahedral & square planar |
| | complexes |
| 4 | $[Ni(CO)_4]$, $[Cu(NH_3)_4]^{2+}$ $[Ni(CN)_4]^{2-}$ and $[Pt(Cl_4)]^{2-}$, limitations of VBT |
| 5 | Crystal field theory: Salient features, splitting of d-orbitals in |
| | octahedral, tetrahedral, and square planar geometry |
| 6 | Applications - colors of transition metal complexes, magnetic |
| | properties of octahedral complex, CFSE and their uses |
| 7 | Factors affecting CFSE: Geometry of complexes |
| 8 | Nature of the central metal ion, nature of ligand |
| 9 | Spectrochemical series. Limitations of CFT. |
| 10 | Experimental evidence for metal-ligand covalent bonding in complexes |
| 11 | Nephelauxetic effect. |
| 12 | MO theory:tetrahedral and octahedral complexes (including p-bonding |
| 13 | Magnetic properties of coordination compounds: Introduction |
| 14 | Magnetic susceptibility and its determination- Gouy and Faraday |
| | method |
| 15 | The effects of temperature on µeff, ferromagnetism, anti- |
| | ferromagnetism and ferrimagnetism. |

LESSON PLAN FOR THE ACADEMIC YEAR 2023-24 SIXTH SEMESTER - PAPER -8

| Name of the Faculty | : | Dr. B.N. Chandrashekar |
|----------------------------------|---|---|
| Title of the Paper | : | Chemistry-VII (Physical Chemistry and Nuclear |
| Magnetic Resonance Spectroscopy) | | |
| Subject code | : | CHEDSC602 |
| Lesson Plan Duration | : | 15 weeks |
| Total teaching period | : | 15 Hours +15 Hours = 30 Hours |
| Workload Per Week | : | 02 Hours Theory + 04 Hours Practical |

| | Theory | | |
|------|---------|--|--|
| Week | Lecture | Topic including | |
| | Day | Assignment/Test | |
| 1 | 1 | Chemical Dynamics: Arrhenius equation-characteristics, Significance of energy of activation, | |
| | 2 | ¹ H NMR spectroscopy: Introduction (including magnetic properties of nuclei, spin population), | |
| 2 | 3 | Temperature coefficient and its evaluation. Thermodynamical formulation of reaction rates (Thermodynamic parameters). | |
| | 4 | relaxation process (spin-spin, spin-lattice, quadrupole | |
| 3 | 5 | Reaction between ions in solutions - Influence of ionic strength on reaction rates | |
| | 6 | number of signals. Instrumentation, chemical shifts, internal standards, shielding and deshielding effects. | |
| 4 | 7 | Primary and secondary salt effects, Effect of dielectric constant (single sphere model). | |
| | 8 | Factors affecting chemical shift (inductive, Van der Waals, anisotropic, H-bonding). Solvents used. Peak area and proton counting, splitting of the signals, | |
| 5 | 9 | Complex reactions: Kinetics of parallel reactions, consecutive reaction | |
| | 10 | Spin-spin coupling, equivalent and non-equivalent protons | |
| 6 | 11 | Reversible reactions (qualitative treatment). | |

| | 12 | Chemical exchange (proton exchange reactions). Calculation |
|----|----|---|
| | | of atoms ratio from the height of signals |
| 7 | 13 | Kinetics of homogeneous catalysis- kinetics of acid-base |
| | | catalyzed reactions-specific acid and specific base catalysis |
| | 14 | coupling constant (geminal, vicinal, long-range coupling). |
| | | Restricted rotation. Double resonance (spin decoupling), |
| | | nuclear overhauser effect. |
| 8 | 15 | general acid base catalysis. Enzyme catalyzed reactions, |
| | | Mechanism (Lock and Key theory), |
| | 16 | Structure determinations/interpretation of spectra of; ethane, |
| | | propane |
| 9 | 17 | Kinetics of enzyme catalyzed reactions - HenriMichaelis- |
| | | Menten mechanism, |
| | 18 | 1-bromopropane, 2- bromopropane, ethylene, propene, |
| | | acetylene, propionamide |
| 10 | 19 | Significance of Michaelis-Menten constant, Lineweaver- Burk |
| | | plot |
| | 20 | methylamine, dimethylamine, trimethylamine, ethyl acetate |
| 11 | 21 | Effects of enzyme concentration, pH, Temperature, catalysts |
| | | and Inhibitors on enzyme activity. |
| | 22 | methyl cyanide, ethylbenzene, o-cresol, p-cresol |
| 12 | 23 | Kinetics of fast reactions: Introduction, Study of reactions by |
| | | relaxation method (Temperature and pressure jump) |
| | 24 | benzoic acid, anisole, benzaldehyde, |
| 13 | 25 | flow method (continuous flow and stopped flow method) |
| | 26 | acetaldehyde, benzophenone, |
| 14 | 27 | Flash photolysis and Shock tube method |
| | 28 | acetophenone, thiophenol |
| 15 | 29 | Revision of syllabus. |
| | 30 | Revision of syllabus. |
| | 31 | Revision of syllabus. |
| | 32 | Revision of syllabus. |

| Name of the Faculty | : | Dr Shankaresh.N |
|---------------------|---|---------------------|
| Title of the Paper | : | Inorganic Chemistry |
| Workload Per Week | : | 01 Hour Theory |

| Week | Theory |
|------|--|
| 1 | Paints: Constituents and their functions, manufacture of lithopone and titanium dioxide. |
| 2 | Propellants: Definition, characteristics, classification and applications. |
| 3 | Abrasives: Definition, classification with examples, hardness, manufacture and applications of carborundum, alundum and tungsten carbide. |
| 4 | Applications of carborundum, alundum and tungsten carbide. Refractories: Definition, properties, classification with examples |
| 5 | Different steps involved in the manufacture of refractories. Applications of refractories. |
| 6 | Ceramics: Introduction, types, manufacturing process, applications. |
| 7 | Explosives: Origin of explosive and classification. |
| 8 | Preparation and explosive properties of leadazide, PETN, cyclonite (RDX). |
| 9 | Fertilizers: Economic importance and synthesis of nitrogenous fertilizers- CAN, ammonium sulfate, |
| 10 | Ammonium nitrate and urea. Phosphate fertilizers- calcium dihydrogen phosphate, super phosphate. |
| 11 | Silicates: Structure, classification - silicates with discrete anions, silicates containing chainanion |
| 12 | Silicates with layer structure, silicones with three dimensional net-work and applications. |
| 13 | Nanotechnology: Definition, uses and nature of nanotechnology. Nanomaterials: Definition, properties and applications. |
| 14 | Carbon nanotubes: Definition, types, methods of preparation (mention), properties and industrial applications of carbon nanotubes, |
| 15 | Nanowires: Definition, types, production of crystalline nanowires by vapour-liquid-solid synthesis method, application of nanowires. |

| Name of the Faculty | : | Mr. Nagendra C S |
|---------------------|---|---------------------------------------|
| Title of the Paper | : | Inorganic Chemistry |
| Workload Per Week | : | 01 Hour Theory and 04s Hour Practical |

| Week | Theory |
|------|---|
| 1 | Rearrangements: Reaction and mechanism of Wagner-Meerwein |
| 2 | Rearrangements: Reaction and mechanism of Fries, Beckmann |
| 3 | Rearrangements: Reaction and mechanism of Hofmann, Benzil- benzilic acid |
| 4 | Rearrangements: Reaction and mechanism of Favorskii, Dienone- phenol |
| 5 | Rearrangements: Reaction and mechanism of Benzidine rearrangement |
| 6 | Rearrangements: Reaction and mechanism of Baeyer-Villiger oxidation |
| 7 | Rearrangements: Reaction and mechanism of Arndt-Eistert reaction |
| 8 | Amino acids and Peptides: Amino acids: Synthesis (from a-halogen acids, Gabriel phthalimide, malonic ester) |
| 9 | Reactions (alkyl halides, nitrous acid, acid halide, NH3, LiAlH4). |
| 10 | Classification and nomenclature of peptides. Sanger and Edman methods of sequencing. |
| 11 | Cleavage of peptide bonds by chemical and enzymatic methods. |
| 12 | Peptide synthesis- Protection of amino group (Boc-) and carboxyl group as alkyl esters. |
| 13 | Use of DCC, and HOBt in peptide bond formation reactions. |
| 14 | Deprotection and racemization in peptide synthesis. Solution and solid phase techniques. |
| 15 | Synthesis of oxytocin. Introduction to peptidomimetics. |

| Practical | | |
|-----------|---|--|
| Practical | Торіс | |
| Day | | |
| 1 | PART-A: Hydrolysis of methyl acetate in presence of two different | |
| | concentrations of HCl and determination of the relative strength. | |
| 2 | Determination of energy of activation for the reaction between | |
| | K ₂ S ₂ O ₈ versusKI(first order) in two different temperatures. | |
| 3 | Determination of rate constant for the reaction between | |
| | chloramine-T and indigocaramine dye in pH 10 buffer medium | |
| | spectrophotometrically. | |
| 4 | Conductometric determination of strength of HCl, CH ₃ COOH and | |
| | CuSO ₄ versus NaOH. | |
| | Conductometric titration of sodium sulphate versus BaCl ₂ . | |
| 5 | Conductometric determination second order rate constant for the | |
| | saponification of etnyl acetate. | |
| 6 | Determination of partial molar volume of NaCl-H ₂ O system by | |
| | apparent molar volume method. | |
| 7 | Potentiometric titration of acid mixture (CH ₃ COOH and | |
| | CICH ₂ COOH) versus NaOH | |
| | Practical Test: Part - 1 | |
| 8 | PART-B: Organic Preparations: Cannizarro reaction of | |
| | benzaldehyde. | |
| 9 | Friedel-Crafts reaction of benzene and acetyl chloride. | |
| 10 | Oxidation of cyclohexanol. | |
| | Preparation of p-iodonitrobenzene | |
| 11 | Preparation of N-phenyl-2,4-dinitroaniline. | |
| | Preparation of 2,4,6-tribromoaniline. | |
| 12 | Preparation of 2,4-dichlorophenoxyacetic acid. | |
| 13 | Practical Test: Part - 2 | |
| 14 | Repetition of experiments. | |
| 15 | Repetition of experiments. | |
