**SYLLABUS**

**Add on course: Ethnobotany and Medicinal Plants**

**Objective of the course:** Introduction to Ethnobotany and medicinal plants explores the fundamental relationships that exist between plants and indigenous/traditional cultures from around the world. The course presents the history of indigenous/traditional plant use in relation to cultural development as well as how modern scientific approaches to ethnobotanical investigation are revealing new and exciting applications for plant materials. It also provides information on various categories of plant use, the importance of traditional knowledge to Western culture, and the role of plant conservation and cultural sustainability.

**Learning Outcomes:**

On successful completion of this course, the students will be able to:

- Know about the traditional knowledge of plants and their uses especially their roles in curing various human diseases Acquire knowledge on various types of drug preparation
- Understand various phytochemicals involved in therapeutics
- Study certain important plants involved in home remedies
- Understand the importance of preservation and conservation of indigenous medicinal plants.

**Human dimension of the course:**

The course will help the students to understand the correlations between the socioeconomic stratification of the society and the evolution of ethnobotany as a vanishing tool for treatment of human ailments. It can be regarded as an awareness programme on the role of humans in the diminishing floral resources and the ways of conserving them. Last but not the least, the field studies and group works will help to foster a sense of brotherhood among the students which will help in their future group work or collaborative work.
