OLD AGE HOME VISIT REPORT ON 13-03-2020

Students of Sri Adichunchanagiri First Grade, From the Department of Sociology were visited to Matrubhumi free old age Home ON 13-03-2020

Dr.Praveen kumar.s, Head of the Department of sociology, Arun Kumar, Lecturer, K.B Parvathamma Assistant Professor, Department of Geography, Dr Sanjay K, Assistant Professor, Department of History were also presented.

The Programme was started by watering the plant, Dr Sanjay Assistant Professor, Department of History welcomed Naganna and his wife, who is the In charge of the old age home.

Naganna spoke to the Students that the children should respect the elder people and they should inculcate good mannerism in their life. He also guided the students to take care of their elder people when they are alive, he also emphasizes that environmental protection is the main responsibility for all of us.

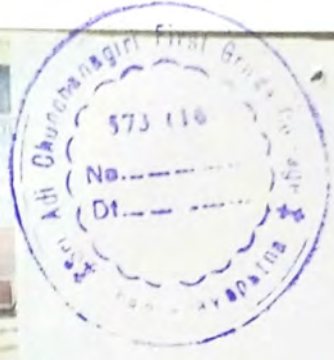

Even Dr Praveen kumar.s, Head of the Department of sociology, spoke to the students and said that the students should imbibe good human qualities and ask the students to transform their lives healthily. He also suggests to take care of their parents and not to send them to the old age home when they become old.

Students sang devotional songs and a final year BA student Nayana shared her opinions about the programme and they spent about three hours in the old age home.

The students who were present in the programme spend some time with the elderly people and interact with them and listen to their problem. At the end of the programme, fruits were distributed to all and had lunch in the old age home.

Naganna, who is the care taker and the In charge of the old age home, gave a felicitous greeting for all.

Industrial Visit

SAFG College CR Patna had organized an industrial visit on 22-01-2020 Wednesday to Chamundeshwari sugar factory Srinivaspura, Channarayapatna Taluk Hassan District, registered under the Co-operative societies Act, Chamundeswari Sugars Limited (SCSL), incorporated in December 1970, is promoted by Dr.N.Mahalingam of the 'Sakthi Group' Coimbatore, Tamil Nadu.

In this visit B.Com Students actively participated and learnt the process of converting sugar cane into Sugar and the cost incurred for the process.

The students were also given information on the cost for growing sugar cane and the incentives given by the sugar factory for growing sugar cane, like providing subsidies to the farmers, Fertilizer etc...

Summary:

The visit was aimed to enhance the knowledge of the students, to understand the operations that are used in sugar factory and to understand different process implemented to prepare sugar from sugar cane. At industry students were able to see and understand different mechanical operations carried out in industry eg. Cutting, shredding, screening etc. Students have experienced the actual operations which are been thought in the classroom regarding the process conversion of raw materials in to various stages for finished products. The aim of visit was full filled at the end of sugar factory visit.

Nandini Milk Production Plant Factory Industrial Visit Report

Place of Visit : Nandini Milk Production Plant (KMF) Factory, Shettihalli, Channarayapatna

Date : 07-10-2019

Aim of Industrial Visit:

Industrial visit is considered as one of the tactical methods of teaching. We can know the things practically through interaction, working methods. It gives exposure from academic point of view industrial visit provide us information about practical working environment.

NAME OF THE INDUSTRY

Nandini Milk Production Plant (KMF) Factory ,Shettihalli, Channarayapatna

About KMF (Karnataka Milk Federation): It was started in the year 1975 as per the act of KDDC (Karnataka Dairy Development Corporation). In 1983, it was renamed as KMF (Karnataka Milk Federation)

As part of the curriculum, our college has organized an industrial visit to students. Our college has arranged campus bus to reach the destination around 10 am. Everyone were

fascinated after looking at the infrastructure, garden maintenance and hygienic conditions of the factory. Before getting into the premises, all students wore head cap, face mask and hand gloves, which made the students to know about the maintenance of hygienic in food industries. First we had been to the main plant, Milk processing plant.

We also took students to the milk transportation center, where they distribute the end product to the every corner of the state. All students know the other processing steps which involved in dairy industries such as separation, preservation and package. The idea of unpasteurized milk separation is explored to the students, which inculcate students to think innovative practices remained in the food industries.

The next unit is cream pasteurization unit. The raw unpasteurized cream was stored in the tanks and next there are so many tubes through this the separated milk enters to the pastarisation unit.

After students visiting to ghee plant, they come across the knowledge of extraction of butter and ghee. In the beginning, the milk was separated from cream nothing but butter is sent to ghee plant then butter was transferred to ghee cattle to get pure butter (removing water content from it) then it was transferred to ghee settling tank there it removes all the sediments then it transferred to final tank there they had flavor odor etc. Then it goes for granulation part after it is sent to laboratory test followed by package to the customer. Students also got a chance to visit an ice cream plant. Here the fatty butter is the main raw material for ice cream production. The starting point to ending process, the entire process was done by machine. All students enjoyed the fresh ice creams in the production. Here we ate so many sweets they are freshly prepared and too tasty.

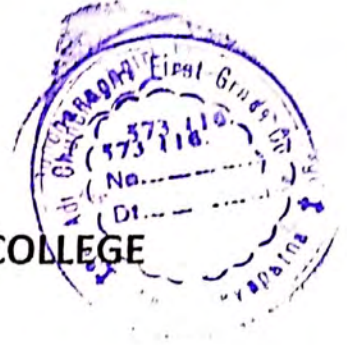

Totally, faculties and students enjoyed the science behind industry from this entire trip. We came to conclude that the works which were done by humans in earlier days was shifted to machine, so we think the industrial revolution created so many jobs.

After the discussion with HOD and other staffs, we left the factory at 2.30pm by college bus and finally we reached our college at 2:45pm.

At last but not the least, we all are thankful to our college Principal and HOD of chemistry department and other staff members who are all supported us for the industrial visit.

DEPARTMENT OF HISTORY

A Brief Report on the Study Tour 2018-19

The study tour was organized for the final year B.A. History students (to study the History & Culture of South India). The tour was made mandatory for all the students as it was related to the IA marks.

It was a three days tour from ~~28-09-2018~~ to ~~01-10-2018~~ to visit the Historical places of North Karnataka like Chitradurga, Hampi, Kudalasangama, Bijapur, Badami, Ihole, Pattadakallu, Mahakuta and other places. The tour consisted of 93 students along with Prof. E. Naganna of Geography Department Mr. Rajesh H.S. and Dr. Sanjay of History Department.

The students were very much enlightened about

- The art and architecture of Chalukyas of Badami.
- The monuments of Vijayanagar empire
- The monuments of the Sulthans of Bahumani
- The forts of Chitradurga and other Historical places of North Karnataka.

Sugar Factory Industrial Visit Report

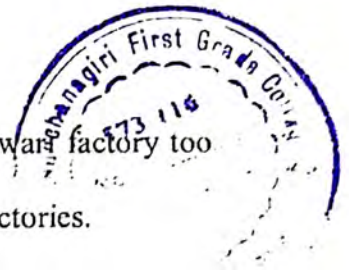

Place of Visit : Srinivasapura, Hassan district

Date : 19-09-2018

As a part of the curriculum and in the intention to know about sugar industry, students got an opportunity to visit Srinivasapura sugar factory and their surroundings. The brief account tour as follows.

On 19-09-2018, we had been to Srinivasapura sugar factory. In that Industry 185 million tons of sugar was produced. It is one among the industries situated near to Channarayapatna town. The industry is just 15km far from Channarayapatna. We travelled by campus bus along with our HOD and other staff members. we straight away reached Srinivasapura at 9.20 am. It was sunny when we reached commercial department.

Chamundeshwari Sugar factory at Srinivasapura near to Channarayapatna taluk grows sugar cane. The factory had produced sugar from sugarcane which had been purchased from growers at Rs 2100 per ton during 2014-15. Also State government had fixed a price of Rs 2500

per ton. As in the case of any other factories across the state, Chamundeshwari factory too had objected to the government price and agreed to pay the price on par with other factories.

In the industry students came to know that sugar is produced in two principal ways from beet or cane. In beet production sugar is extracted or leached from sliced sugar beets, after which juice is purified through a series of milk of lime and CO_2 process steps. The filtered juice evaporated (thickened) and sugar is crystallized from it.

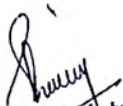

Apart from these, afternoon we had lunch and then return back to the factory to know the manufacturing process of sugar.

Then they explained to the students about the raw juice extraction process and other process such as thermal treatment and chemical conditions (under pH 7.1). and then defecated juice is heated under 103°C .

We had an interaction with many people and workers in the factory.
curious to ask question and got satisfied with answer.

This trip helped students very much in understanding and appreciating the knowledge about industries which is the basic idea of knowing the facts of sugar industries commercially.

Report on field tour to Nisargadhama and nearby places

Date of visit: 25.11.2017

With the permission of Principal Dr. K.S Devaraj and HOD of Botany and Zoology Prof. Kambegowda and Radhamma KM on 22.11.2017 along with the CBZ Students we all visited to **Nisargadhama** by 8AM by bus and observed various bamboo grooves and plant species with families of deer. Later we went to **Dubare** Elephant camp and **Abbe falls** with long walk. By 5pm we reach **Raja Seat** in Madakeri and observed various species of ornamental plant and stunning beauty of sunset by 6 pm. By this one day trip students observed many taxonomical features of flora and fauna and by 10 pm we reach College campus safely.

Channarayapatna

Respected Sir,

Subject: Permission to conduct one day study tour to Water packaging plant.

As per the syllabus, we have planned to conduct one day study tour on 09/10/2017 to water packaging unit, Channarayapatna for the purpose gaining knowledge on drinking water processing steps; Storage of water, Osmosis technique, Chlorine gas process, Sand filtration, Carbon filtration, Microfiltration, Bottle filling, Packaging, Marketing and branding. The study tour is conducted for Final year B.Sc students. Hence I kindly request you to give the permission. Hemalatha K M, Shridhar G B, Dr.Rashmi.B.G are assigned to take the enrolled students to this study tour. Please do the necessary action.

Thanking you

Water Packaging Plant Factory Industrial Visit Report

Place of Visit : Water Packaging Plant, near Channarayapatna, Hassan Dist.

DATE : 09-10-2017

Binding with the curriculum and extension of the syllabus, we visited water packaging plant. Students came to know opportunities in eater employment opportunities in drinking water purification and packaging. aqua The brief of study trip is as follows:

On 9/10/2017, we have been to water supply area near Channarayapatna. In that plant, 5000 bottles are packed per day. It is popular water packaging plant near the rural location at Channaryapatna. It is situated outside the village. We left channarayapatna on 9/10/2017 at 10:00am by the college bus along with our HOD Dr. N. Shankarsh and other staff members. We reached the water packaging plant there at 10:40 am.

Water filters near Channarayapatna taluk produces 5000 bottles per day. In that water packaging plant, packaged drinking water uses water from any source which has to be treated and disinfected a process that could involve filtration, UV or Ozone treatment or reverse osmosis before it is fit for human consumption.

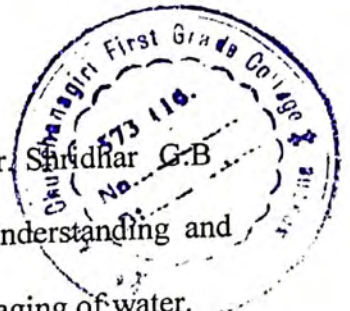

There we came to know that packaging is done by basic requirements. The section in a packaged drinking water plant needs. Total space 5000sq ft built up area of covered area, 65 HP Power.

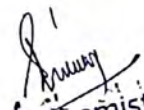

Approximately 3000 LPH of raw water of which 70% will be used and 30% will be rejected. This is however an indicative quantity as it will depend on the TDS (Total dissolved solids) of the water. In the packaging plant, we came to know that the price of mineral is Rs 10-12 while mineral water starts at Rs 20 per liter and can go up to Rs 125 per liter.

After knowing all these, we came to know the water and packaging process. We had great opportunity to visit the water packaging plant filter, we had interaction with the workers in the packaging plant to know the advantages and challenges in the water industry. Students were curious to see the packaging of water.

The whole trip was planned and organized by Mrs. Hemaltha K.M, Mr. Shridhar G.B
Dr.Rashmi B.G who guided all the way. The trip helped very much in understanding and
appreciating water packaging plant which is the basic idea of knowing the packaging of water.
